

## WC-1 Water Cooler Rack Instructions

Thank you for purchasing a TrimmerTrap product. The WC-1 secures various sizes of water cooler jugs. The WC-1 must be attached using a minimum of three 5/16" Grade 5 bolts and self locking nuts. **Due to the many different construction techniques used on trailers, the hardware required to attach the rack is not included and must be acquired by the user.** A series of holes in the racks bottom and back sections can be used for this purpose. Four vertical slots in the back section must be kept open for installation of the included adjustable straps.

Unlike other products on the market, the WC-1 was designed to secure different size coolers up to five gallons, and under certain conditions, larger sizes. If the WC-1 is to be used with coolers larger than five gallons, it must be attached using both the bottom and back sections. Both bottom and back sections must also be supported at the attachment points, see figure # 1.

After installation, insert the two adjustable straps as shown in figure # 2 and secure the cooler by wrapping the straps around the cooler and back through the "cam lock" buckle. Cinch the straps down tightly by pulling the strap through the buckle. The straps will securely hold the cooler in place when installed properly. Secure the loose ends of the straps by wrapping or tying them around the section of strap behind the cooler. The straps are wearable parts and must be inspected frequently for damage and wear. Although the straps are manufactured using a high quality, UV and weather resistant material, over time, exposure to sun and other elements will slowly deteriorate them. Inspect daily and always replace damaged or worn straps before use.

**NOTE: IT IS THE PURCHASERS SOLE RESPONSIBILITY TO ASSURE THAT THE RACK IS INSTALLED SAFELY AND SECURELY TO A COMPONENT THAT WILL ADEQUATELY SUPPORT THE EQUIPMENT.**
